ACTIONS

Frontend Development

- Developed a multi-step student application workflow page in Next.js.
- Implemented dynamic step navigation with a common header across all application stages.
- Created responsive layouts for student profile, application details, and visa processing sections.
- Added tab-based content switching for Step 1, Step 2, and Step 3 without page reloads.
- Improved mobile responsiveness and overflow handling for navigation tabs.
- Built Ticket Communication History UI with message tracking and communication timeline.
- Positioned communication/chat action components in the bottom-right section for better accessibility.
- Enhanced visa processing dashboard UI with organized sections for visa details, financial information, biometrics, and document tracking.
- Added conditional rendering for empty states and no-data scenarios.

Backend Development

- Integrated visa processing APIs with the counsellor application workflow.
- Implemented CRUD operations for visa processing records using Mongoose.
- Added transaction handling to ensure data consistency during visa updates.
- Enhanced aggregation pipelines to fetch user, application, and visa-related information efficiently.
- Updated API responses to include application-related document information.
- Improved filtering and search functionality using URL query parameters.
- Added support for country-based application filtering and default shortlist selection.
- Optimized data fetching and validation logic for application and visa modules.
