Designation: Software Developer

ACTIONS

1. User Listing API Optimization

- Updated the User Aggregate API.
- Fixed duplicate user records issue caused by lookup and unwind operations.
- Improved aggregation pipeline by converting lookup arrays into single objects using `$arrayElemAt`.
- Added duplicate prevention logic with `$group` and `$replaceRoot`.
- Optimized profile, assignee, and referral user data fetching.

2. Profile Data Integration

- Enhanced user profile lookup.
- Added profile completion percentage in user listing response.
- Handled cases where profile data is unavailable using fallback empty objects.

3. Assignee & admin panel

- Improved assignee data retrieval.
- Added referral user information mapping.
- Reduced unnecessary array responses from lookups.
- update the program page send the description , remove the unnecessary section

4. API Data Validation & Debugging

- Investigated duplicate records in user listing API.
- Identified potential issues with duplicate referral codes and multiple profile entries.
- Prepared validation queries to detect duplicate records in MongoDB collections.

5. Backend Performance Improvements

- Reviewed aggregation pipeline structure.

- Reduced response payload size by excluding unnecessary fields.
- Ensured password field is removed from API responses.
-
