EDUCATION

Jigyasa University

Bachelor of Computer Application

2021 – 2024

Uttaranchal University

Master of Computer Applications

2026 - Present

WORK EXPERIENCE

Nexzem Technology — React Native Developer

Dec 2025 - Present

- Built real-time chat using Socket.io and set up push notifications via Pusher — two features that made a noticeable difference in how users actually interacted with the app.
- Integrated Google Maps along with Geolocation, Directions, and Direction APIs, and also handled Google Sign-In and Google Wallet implementation end to end.
- Used Redux Toolkit and Zustand for state management depending on what the project needed, and plugged in Firebase Crashlytics to catch and fix production crashes before users had to report them.
- Worked on performance optimization, integrated RESTful APIs, and stayed in close sync with backend and design teams throughout.

Pearl Organization — Technology Executive

Feb 2025 - Dec 2025

- Developed and optimized cross-platform apps using React Native.
- Built reusable UI components and integrated APIs with Axios.
- Managed state efficiently using Zustand.
- Collaborated with design and backend teams for smooth, bug-free releases.
- Contributed to web and admin panel features for consistency across platforms.

PROJECTS

3BProfiles - Apr 2025 – Sep 2025

- Built and shipped a cross-platform business networking app (live on Play Store and App Store) using React Native, handling everything from UI implementation to API integration with a backend team.
- Implemented real-time chat using Socket.io and set up push notifications so users stay connected and updated without opening the app.
- Integrated Google Maps with geolocation support to help users discover and navigate to nearby businesses and partners.
- Managed app-wide state with Zustand, wired up RESTful APIs for core business features, and used Firebase Crashlytics to track and fix crashes in production.

StubGuys – Event Booking and Organizing Platform - Jan 2026 – Present

- Built an event booking app from scratch — covers Google Sign-In, browsing, the full booking flow, Stripe payments, and Firebase push notifications.
- Plugged in Google Maps and geolocation for location-based event discovery, and handled Google Wallet integration for digital tickets and payments.
- Added real-time chat using sockets so users could communicate instantly without leaving the app.
- Set up Firebase Crashlytics to catch production crashes early — made debugging a lot faster and kept the app

stable post-launch.

TECHNICAL SKILLS

- **Programming Languages:** JavaScript, TypeScript, Python
- **Frameworks & Libraries:** React Js, React Native, Expo, Tailwind,, React Native Paper
- **Tools & Technologies:** Git, GitHub, Postman, Firebase, Socket.IO, Redux Toolkit, Zustand, Google Sign-In (OAuth 2.0), Stripe, Google Wallet
- **Testing:** Jest, React Native Testing Library
