Designation: Software Developer

ACTIONS

1. Application Status Form Enhancement

- Added `onStatusDataCollect` prop to collect and return status-specific form data to the parent component.
- Implemented dynamic data collection and submission for all application status types.
- Ensured collected data is stored and sent through the `statusDetails` object during status updates.

2. Status Details Form Implementation

Added dedicated form sections and data handling for the following application statuses:

AdmissionProcessing

- Created status-specific data collection structure.
- Integrated data submission into application status updates.

OfferReceived

Added support for:

- Title
- Required Documents
- Document URL
- Issued By
- End Date

- Currency
- Program
- Faculty
- Relevant Dates

Completed

Added support for:

- Document Type
- CAS Number
- Important Dates
- Offer Letter Information

3. Form Validation

- Added validation for all required fields across status forms.
- Prevented form submission when mandatory information is missing.
- Displayed validation feedback for incomplete fields.

4. Status Details Display

- Implemented UI to display submitted status details.
- Added support for rendering status-specific information in the application workflow.
- Ensured previously submitted data is visible during application tracking and review.

5. Interview Activities

- Conducted 3 technical interviews.
- Evaluated candidate technical skills and project experience.
- Provided interview feedback and assessment notes.
